

In November 2011, Secop launched a new PTC starting device (code number **103N0011**). This PTC device has a side accessible screw connection. This is a direct replacement for the previous PTC starting device (**103N0002**).

All water coolers fitted with Secop TL2.5F compressors are now using **103N0011** PTC starting devices and all spare parts orders will receive **103N0011** PTC device

The functionality of **103N0002** and **103N0011** parts are exactly the same – the only difference is the orientation of the screw access.

Example: PTC starting device 103N0002 to be replaced by PTC starting device 103N0011
