

**DRAIN VALVE ASSEMBLY: 037899-001**

OASIS have now introduced a new hot tank drain valve that will be used on all bottle and POU water coolers manufactured in Europe.

The new valve comes with an end cap that is directly attached to the valve body. This reduces the risk of the end cap being lost when the hot tank is being drained.

The new valve has been designed as a direct replacement for all other OASIS drain valves - all orders for other models of drain valves will now be automatically replaced with the new OASIS assembly.
