

Oasis have introduced a number of changes to the following Carbo Kalix models:

AMB/COLD/CARBO P1PVECCDKY
HOT/COLD/CARBO P1PVECCDHSY

- Carbonation Pump (Supplier change)
Transformer (Supplier change)
Main PCB board (Changed from 220v to 24v)
Carbonation PCB (Eliminated – now part of Main PCB)
Expansion Tank (Replaced by PRV - connected to vent behind spout)
Solenoids (All solenoids are now 24v with the addition of 1 extra solenoid on Cold side)
(Old models used 2 x 220v + 1 x 24v solenoid.Current models use 4 x 24v solenoids)

Note : The new components are not directly interchangeable with original components. Therefore existing “older” KALIX coolers requiring service parts will still need to be fitted with the old original parts. These coolers are distinguishable by the “Change Date” listed below.

The below table summarizes the changes of part numbers:

Table with 4 columns: Component, Old P/N, New P/N, Change Date. Rows include Carbonation Pump, Transformer, Main PCB (Ambient/Hot), Carbonation PCB, Expansion Tank, and Solenoids.

The above changes do not apply to the ULTRA models.

Regards
